Study on psychological wellbeing between followers of 
Sri Aurobindo and others

Dr. Rajarshi Kayal

Abstract
Mental health is the state of well-being and the psychological well-being refers to how people evaluate their lives. The present study was intended to compare psychological wellbeing between followers of Sri Aurobindo and others. Sixty adults volunteered for the study. They were divided into two groups – followers of Sri Aurobindo and others. Their psychological wellbeing was tested with the Mental Health Inventory Questionnaire. All the responses were then converted into scores following the scoring guidelines. T –test was used to compare the result. The level of significance was set at 0.05 level. Apparently there were some mean differences in concerned items and sub scales but these are not significant.

Keywords: Mental Health, Psychological well-being, Sri Aurobindo.

Introduction
We all are aware regarding various application of yoga, both physically and mentally. Research has also been going on worldwide. Apart from astanga yog, Sri Aurobindo introduced integral yoga which includes the five aspects of the human being - physical, vital, mental, psychic, and the spiritual aspects. The integral yoga is the way of a complete God-realisation, a complete Self-realisation, a complete fulfillment of our being and consciousness, a complete transformation of our nature - and this implies a complete perfection of life here and not only a return to an eternal perfection elsewhere [1].

Sri Aurobindo established an ashram in Pondicherry. Gradually his followers established such type of ashram in different places. They assemble together, discuss, practice and follow the lessons what Rishi Aurobindo set down.

Mental health is the state of well-being. The psychological well-being refers to how people evaluate their lives. It encompasses specially some variables, such as positive affect, emotional ties and life satisfaction. Positive affect is one aspect of pleasurable and positive experience. Although positive affect overlaps a significant degree with the concept of positive emotions, they are not identical. Positive affect is more closely related to mood states whereas positive emotions involve positive feelings as well as characteristic patterns of physiological arousal, thoughts, and behaviors [2]. An emotional tie is a bonding among people having connected with each other. It can stretch or relax as our emotional thoughts act. Life satisfaction is the way persons evaluate their lives and how they feel about where they are going in the future. It is a measure of well-being and may be assessed in terms of mood, satisfaction with relations with others and with achieved goals, self-concepts, and self-perceived ability to cope with daily life [3].

It is expected that the mental aspect of the followers of Sri Aurobindo is better than that of the other general people as a result of following Sri Aurobindo. On the basis of that perception, the present study was selected.

Methodology

Sample
Thirty followers (members) of Sri Aurobindo from different asrams and thirty other adult people were considered as subject for the present study.
Criterion Measured
The psychological wellbeing is comprised of three subscales i) General Positive Affect, ii) Emotional Ties and iii) Life Satisfaction.

Used tool and data collection
The subjects were given to respond against a set of Mental Health Inventory Questionnaire on psychological wellbeing comprising of three subscales as mentioned. All the responses were then converted into scores following the scoring guidelines [7].

Statistics for Analyzing Data
For this study, mean, standard deviation, and paired t-tests were calculated by statistical software (Mini Tab). The level of significance was set at the 0.05 for this study.

Results and Discussions
General Positive Affect

Table 1: Mean with SD, SE Mean, T-Value and P-Value of General Positive Affect

<table>
<thead>
<tr>
<th>Variable</th>
<th>Groups</th>
<th>Range</th>
<th>Mean ± SD</th>
<th>T-Value</th>
<th>P-Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>General Positive Affect</td>
<td>Followers</td>
<td>10-60</td>
<td>36.63 ± 6.22</td>
<td>1.78</td>
<td>0.040 *</td>
</tr>
<tr>
<td></td>
<td>Others</td>
<td></td>
<td>34.00 ± 5.19</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

*Significant at 0.05 level

From the table 1, it is found that there is a significant difference (T-Value = 1.78, \(P<0.05\)) in General Positive Affect between the followers of Sri Aurobindo and others. The first group scored more than 60% where the second group scored 56.66%.

Positive affect reflects an individual’s experience of positive moods such as joy, interest, and alertness. Positive affect marks or signals current health and well-being [4, 5]; the broaden-and-build theory goes further to suggest that positive affect also produces future health and well-being [6]. All the disciples of Sri Aurobindo believe in the fact that ‘man is a transitional being’ and ‘becoming’ is the aim. This thought may help them to grow positivity.

Emotional Ties

Table 2: Mean with SD, SE Mean, T-Value and P-Value of Emotional Ties

<table>
<thead>
<tr>
<th>Variable</th>
<th>Groups</th>
<th>Range</th>
<th>Mean ± SD</th>
<th>T-Value</th>
<th>P-Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Emotional Ties</td>
<td>Followers</td>
<td>2-12h</td>
<td>6.40 ± 1.61</td>
<td>-3.32</td>
<td>0.999 NS</td>
</tr>
<tr>
<td></td>
<td>Others</td>
<td></td>
<td>7.70 ± 1.42</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

NS = Not Significant

Table 2 shows that there is no significant difference in Emotional Ties (T-Value = -3.32, \(P>0.05\)) between the followers of Sri Aurobindo and others. Here the second group scored higher. This may affect on the result. The spiritual belief may reduce human bonding in the followers of Sri Aurobindo.
Life Satisfaction

Table 3: Mean with SD, SE Mean, T-Value and P-Value of Life Satisfaction

<table>
<thead>
<tr>
<th>Variable</th>
<th>Groups</th>
<th>Range</th>
<th>Mean ± SD</th>
<th>T-Value</th>
<th>P-Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Life Satisfaction</td>
<td>Followers</td>
<td>1-6</td>
<td>4.900 ± 0.759</td>
<td>4.64</td>
<td>0.000 *</td>
</tr>
<tr>
<td></td>
<td>Others</td>
<td>1-6</td>
<td>4.000 ± 0.743</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

*Significant at 0.05 level

From the table 3, it is clear that there is a significant difference (T-Value = 4.64, P<0.05) in Life Satisfaction between the followers of Sri Aurobindo and others. Here the first group scored 81.66% where the second group scored 66.66%.

Following and practicing integral yoga may increase life satisfaction among the disciples.

Psychological Wellbeing

Table 4: Mean with SD, SE Mean, T-Value and P-Value of Psychological Well-being

<table>
<thead>
<tr>
<th>Variable</th>
<th>Groups</th>
<th>Range</th>
<th>Mean ± SD</th>
<th>T-Value</th>
<th>P-Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Psychological Wellbeing</td>
<td>Followers</td>
<td>14-84</td>
<td>44.67 ± 6.09</td>
<td>0.86</td>
<td>0.197 NS</td>
</tr>
<tr>
<td></td>
<td>Others</td>
<td>14-84</td>
<td>43.47 ± 4.64</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

NS = Not Significant

Table 4 shows that the difference in Psychological Well-being between the followers of Sri Aurobindo and others is not significant (T-Value = 0.86, P>0.05). The figure shows a difference but that is not so much so as to be significant.

The Psychological Well-being is the sum of all the scores of General Positive Affect, Emotional Ties and Life Satisfaction. The difference were significant in General Positive Affect and Life Satisfaction but not in the case of Emotional Ties. This may affect on the result of overall Psychological Well-being.

Conclusions
On the basis of the results mentioned above, it can be concluded that

1. General Positive Affect of the followers of Sri Aurobindo is higher than that of the other general people.
2. The difference in Emotional Ties between the followers of Sri Aurobindo and others is not significant.
3. Life Satisfaction among the followers of Sri Aurobindo is significantly higher that other people.
4. Overall Psychological Wellbeing of the followers of Sri Aurobindo is not significantly higher.
