In order to assess the mental toughness of sports person and Para sports person by Sandeep Tiwari. The data was collected tabulated and subject to statistical analysis. Descriptive analysis was done by computing means, standard deviations and t-test. The result revealed that there is significant difference found between the male sports person and male Para sports person.

Keywords: Mental toughness, sports person and Para sports person.

Introduction
The term mental toughness has been described by various psychologists generously and in positive way as they say that mental toughness is the ability which help us to cope with complicated and difficult situation. In this way it is an extremely controversial term. In Sports, we use to say that the athlete who keeps on trying to achieve his or her goal in any favourable or unfavourable condition or circumstances are termed as mentally tough athlete. Hence, in sporting terms it describes the mental state of a sportsperson. Sports scientist working on this field worked hard scientifically and more precisely to define mental toughness as a psychological construct.

Kobasa (1979, 1988) defined mental toughness as “A set of ideas about self and the environment which are comprised of three elements including commitment, control and challenge. A person who is highly committed believes in the meaning of what he is doing and who he is. People who have high degree of control over their bodies can predict the life occurrences and are able to affect what is around them. The individuals who are highly combatant and challenging can skilfully take advantage of the negative and positive opportunities and consider them as security for themselves not as threats.

Smith and Smoll (1989) defined mental toughness as the ability to deal with stress and adversity in a way that performance does not suffer under conditions that place high physical and psychological demands on the athletes.

Mental toughness was defined by Goldberg (1998) as capacity to face adversity and able to bounce back from repeated failures.

Fourie and Potgieter (2001) definition of mental toughness comprise of motivation level, coping skills, confidence maintenance, cognitive skill, discipline and goal directedness, competitiveness, possession of prerequisite physical and mental requirements, team unity, preparation skills, psychological hardiness and ethics.

Jones, Hanton, and Connaughton (2002) [1] defined mental toughness as “having the natural or developed psychological edge that enables an athlete generally, to cope better than your opponents with the many demands (competition, training, lifestyle) that sport places on a performer; specifically, be more consistent and better than the opponents in remaining determined, focused, confident, and in control under pressure.”

Clough et al. (2002) defined mental toughness in the perspective of self-confidence and self-
belief. He opined that mentally strong or tough means that a person possesses superior self-confidence and self-belief in his/her abilities. This confidence and self-belief make him to choose and set goals that are realistic and pursue those goals without being affected by adverse conditions.

Fletcher and Fletcher (2005) included coping skills in relations to environmental stressors in their definition of mental toughness.

Gucciardi, Gordon, and Dimmock (2008) defined mental toughness as enduring attributes which enables an athlete to cope with adverse circumstance and perform well. They also defined mental toughness as maintaining a certain performance level even when game situation is easy or against a weak opponent.

Mental toughness in general terms encompasses some positive psychological attributes that absorbs the effect of stressful situations so that one can perform at its best with consistency (Clough, Earle, & Sewell, 2002). “A set of personal characteristics which is used to guard against life pressure constitutes mental toughness” (According to White 2001), According to Jones (2002) defined mental toughness as developed mental edge that enables an athlete to maintain focus, confidence, determination and control consistently.
