Yoga, health and physical education

Dr. Somappa Badiger

Abstract

Despite an increase in interest pertaining to the benefits of yoga practice, research focusing on the relationship between yoga practice and attention is limited. This study employed a quasi-experimental pre-test, post-test design to measure whether physical activity had an immediate effect on selective attention and mental concentration in young adults, aged 18 to 25. More specifically, this study compared yoga and aerobic exercise classes to assess whether yoga practice improved attention beyond aerobic activity. The yoga and aerobic groups completed two surveys and the d2 Test of Attention at two observation points: immediately prior to and immediately following participation in their respective classes. An analysis of variance (ANOVA) found a statistically significant improvement between pre- and post-test scores on attention for both groups, with a greater improvement for the aerobic group. The findings show that physical activity had an immediate effect on the attention of the sample. Physical Education may provide the right direction and needed actions to improve the health of members of any community, society, nation and the world as a whole. An educational system encompassing the mental, emotional, social and physical dimensions of health becomes imperative to bring about all around development in children.

Keywords: Yoga practice, physical dimensions, physical education, asanas

Introduction

Yoga is a way of a better living. It ensures great or efficiency in work, and a better control over mind and emotions. Through yoga one can achieve both physical and mental harmony. Health is the greatest blessing of all. Health is not just the absence of disease. To enable the individuals to lead a life of complete physical, mental and social well-being and not merely the absence of disease or infirmity. Physical Education may provide the right direction and needed actions to improve the health of members of any community, society, nation and the world as a whole. An educational system encompassing the mental, emotional, social and physical dimensions of health becomes imperative to bring about all around development in children.

Yoga meaning

Yoga is the movement of the body through different positions, postures, and poses.

Definition

"Yoga is skill in actions." Lord Krishna. "Yoga is the way or method through which internal and external facilities of man meets in totality and changes occur and by which may achieve God or feel his existence and may become the part of Him." -Sri Aurobindo

Aim and objectives

The aim of yoga is control over the mind. A man who can-not control his mind will find it difficult to attain divine communion, but the self-controlled man can attain it if he tries hard and directs his energy by the right means. The main aim of yoga is integrating the body, mind, and thoughts so as to work for good ends. Modern life style leads to diseases, which are mostly due to poor food habits, heavy daily routines and to air and water pollution in turn easily affect the human body. The main objectives of the Yogic practices are to make one free from diseases, ignorance, egoism, miseries the affiliations of old age, and fear of death etc.

Guidelines for practicing asanas

We have to keep in mind that while going in for asana practice we have to adhere to general conditions with regard to dress time of practice place of practice etc., so as to achieve the maximum benefits.

Dress: What is the dress proper for the asanas? The minimum possible dress is recommended. More area of our body should be exposed to the atmosphere. The dress should be loose and preferably elastic in nature prefer cotton materials to other kinds.

Time: It can be practiced both in the morning and in the evening. The morning session will be good, because during the mornings the atmosphere is pure and calm and it is very easy to focus our mind in a desired direction. **Place:** The place of practice is very important. While in practice you should not be disturbed by other external factors. So your place that you are free from disturbance and select pooja room or separate hall or better if you have open terrace. The place should have proper ventilation, free from dust ants and quite calm in nature.

Body: Body should be clean, particularly our stomach, and intestine should be empty. Finish your morning routines, take your bath, and after 15 minutes, practice the asanas. The important instruction, the body should be light and fresh. Hence the asanas are done during in the early morning hours or during the evening. **Sequence:** Usually the Yogic asanas are done along with Pranayama and meditation practices in the following sequence. Complete the asanas first. Then follow it with Pranayama and go for meditation the last. **Spread:** The asana is done on a flat horizontal surface covered with a clean blanket preferably a cotton cloth.

Age limit: According to yoga literature, both male and female can practice the asana right from the age of twelve. However the children should not remain in their final pose for long duration as adults do **Priority:** For good results asana practice should begin with Savasana. This helps the body to attain normal metabolism level which is a suitable "stage for beginning the practice.

Concentration: During the asana practice the concentration is a must it is easily achieved when you attempt to see the tip of the nose with your eyes or try to see with your eyes the center of your forehead **Initiation:**

Yogic asana practice needs initiation from a teacher. That is in the initial stage the learning should be from an experienced Guru' is essential

Diet: Yoga teachers insist that two quarter of the stomach volume alone should be filled with food, one quarter with water and the remaining quarter should be kept empty.

Benefits of yoga

1. It develops the physical stability.
2. It keeps a person young.
3. It Strengthens the hamstring, calf, and back muscles.
4. It relieves the stiffness of joint, particularly at knee, hip and ankle.
5. It removes excess fat in the abdominal region

11. It develops the balancing power in the body.
12. It loosens the spinal column.
13. It reduces the excess fat in the sideways.
14. It strengthens the ankles and tones the muscles of the legs.
15. It promotes the spinal bone growth

Asanas

Asanas-(Postures) Asanas means holding the body in a particular posture to bring stability to the body and poises to the mind. The Practice of asana brings firmness to the body and vitality to the body and mind. The people of ancient Greece believed in the principle. A sound mind in a sound body. By practicing asana one frees himself from physical disabilities and mental distractions. It's a state of complete equilibrium of body, mind and spirit asanas may be of the following types

- Meditative Asanas
- Relaxation Asanas
- Cultural Asanas

Different asanas

Asanas are very useful and important from the view point of physical, mental and spiritual growth of an individual. **Methods of Doing Asanas**

1. Sitting posture
2. Standing posture
3. Lying posture -Supine, Prone (Write any 3 Asanas with Photos, Method, Benefits)

Meditation

"The greatest factor for spiritual life is meditation. Meditation we feel our divine nature. We do not depend upon any external help in meditation. Meditation can bring about a true personal transformation. As you learn more about yourself, you'll naturally start discovering more about yourself **Benefits** to experience the benefits of meditation, regular practice is necessary. It takes only a few minutes every day.

Once imbibed into the daily routine, meditation becomes the best part of your day! Meditation is like a seed. When you cultivate a seed with love, the more it blossoms. Busy people from all backgrounds are grateful to pause and enjoy a refreshing few minutes of meditation each day. Dive deep into yourself.

Health education meaning

Health education is concerned with promoting health as well as reducing behavior induced diseases. In other words health education is concerned with establishing or inducing changes in personal and group attitudes and behavior that promote healthier living.

Definition

"Health Education like general education is concerned with changes in knowledge, feelings and behavior of people. In its most usual forms it concentrates on developing such health practices as are believed to bring about the best possible state of wellbeing" -W.H.O. Technical Report (1954)

Objectives of health education

1. To enable the students to develop a scientific point of view of health with reference to traditional and modern

concept of health.

2. To enable the students to identify health problems and understand their own role on health and to medical agencies in meeting those problems.

First aid

(You can paste the First Aid Photos)First aid is the immediate treatment given to the victim of the accident or sudden illness, before medial help is obtained.

The aims of first aid

First Aid has three main aims:

To preserve life.

To promote recovery

To prevent worsening of the causality's condition until the victim receives the services of a doctor or arrangement transportation to hospital. First Aid is based on scientific medicine and surgery. It is skilled assistance. But the First

Aider need not be a doctor. After the doctor takes charge the First Aider's responsibility ends. He can then stand by, to help the doctor. The first Aider should observe carefully, think clearly and act quickly. He should be calm, cool and confident. He should not get excited. He should ask someone to call a doctor inform hospital immediately by giving details about victim. While waiting for the doctor, he should give First Aid methodically.

The scope of first aid

1. The First Aider should examine the causality to know the details of injuries and their nature. This is known as diagnosis.
2. The Diagnosis will give him an idea of the Treatment to be given until the doctor takes charge.
3. The next step is to send the causality to his house or to a hospital, as the case may be in a suitable atmosphere.

Need and importance of first aid

1. If an accident happens the work place, you cannot be a helpless witness, since simply standing by can potentially worsen the situation. This is why it's important to have at least a basic knowledge of first aid.
2. First aid is the initial assistance given to a victim of injury or illness.
3. Providing quick medical treatment until professional assistance arrives.
4. It affords people with the ability to provide help during various emergency situations
5. First aid helps ensure that the right methods of administering medical assistances are provided.
6. Knowledge in first aid also benefits the individual themselves.

Food and nutrition

(You can paste the healthy food habits photos)

Food is a substance which produces heat and energy in the body, builds and repairs tissues. It also contains some rough-age which adds quantity or bulk to our diet.

Functions of food

- Food builds up new tissues.
- Food repairs the worn out tissues
- Food produces heat and energy in our body
- Food supplies material for growth and nourishment to all the parts of body
- Food helps in the production of compounds that regulate body processes.
- Food is very important for life

Food obtained from vegetables

Vegetable foods contain a large proportion of carbohydrates and almost all proteins, fats and vitamins. These foods are i) Cereals, ii) Pulses. iii) Roots and Tubers. iv) Green Vegetables, v) Fruits, vi) Nuts, and Vii) Fungi.

- Cereals are in the form of grains such as wheat, rice, maize. They have high nutritive values.
- Pulses include Peace, beans. They are a rich source of protein. They contain vitamins A. B and C when fresh. They also have sugar and minerals but little starch
- Roots and Tubers include beetroot, carrot, radish, turnip, arrow root.
- They contain a high percentage of starch and proteins but no fats.
- Green Vegetables consist of buds, leaves, leaf-stalk or the

whole plant. They contain a high percentage of water and some protein, starch and fats. They are also rich in vitamins A,B,C,E and K.

- Fruits are rich in sugar salts, acids and vitamins.
- Nuts possess a high percentage of proteins and fats but less carbohydrates. They are also rich in vitamin B.
- Fungi are the mushrooms which contain over 90% of water and little protein. They have no food value.

Food obtained from animals

These foods include

i) Meat. ii) Fish. iii) Egg. iv) Milk.

- Meat usually means mutton or pork. It is rich in protein, iron and some vitamins of B group.
- Fish consists mainly of protein, fat and water. The fat content amount varies widely in different kinds of fish
- Eggs have a high nutritive value. They are rich in iron, Phosphorus and vitamins A and D.
- Milk is obtained from the cow, buffalo, goat and reindeer. Milk contains all the nutrients. It is generally given to babies and children as complete food. Milk is rich in proteins, minerals and vitamins A and B Milk products like cream, Butter, Curd, cheese and ghee are also rich sources of energy.

Physical education meaning

The word "Physical Education" comprises of two separate words. "Physical" and "Education". The plain dictionary meaning of word physical as "relating to body", which may mean any one or all body characteristics of a person such as physical strength, physical endurance, physical fitness, physical appearance or physical health.
